CAM for SharePoint

Empowering Law Firms with Streamlined Data Management and Enhanced Security

Industry Challenges

Law firms face unique challenges in managing vast amounts of data, maintaining secure client collaboration, and ensuring compliance with regulatory standards. Traditional methods of data storage and sharing can lead to workflow inefficiencies, security risks, and regulatory non-compliance.
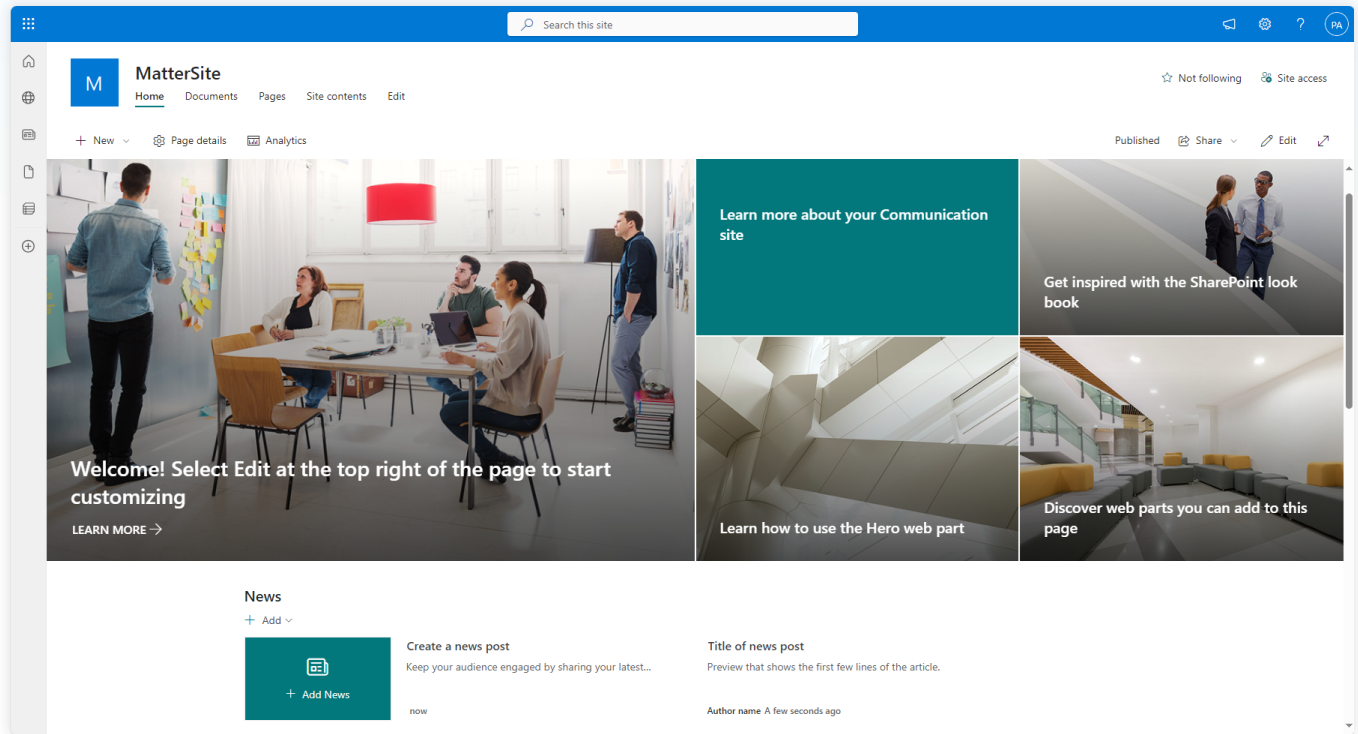

Overview

In response to these challenges, CAM for SharePoint revolutionizes data management and collaboration. By seamlessly integrating DMS, SharePoint, and Microsoft Teams, CAM offers law firms a centralized platform for data management and secure access, transforming these hurdles into opportunities for improved efficiency and productivity.

Provisioning and Templating

CAM's provisioning capabilities offer immense value to organizations by streamlining the integration and management of multiple collaboration systems. By seamlessly intedigrating source systems such as HRIS, CRM, Time & Billing, Portfolio Management Systems, and more, CAM allows for the efficient creation and governance of various elements such as workspaces, sites, teams, channels, and users across different collaboration systems like Teams, SharePoint and DMS. One key advantage is the standardizing of naming conventions and folder structures which enhances user adoption, reduces data chaos and improves data retrieval. The application of metadata to projects further enhances this by enabling swift data location and providing risk management teams with the necessary context to apply the appropriate security measures in case of a breach or outage.
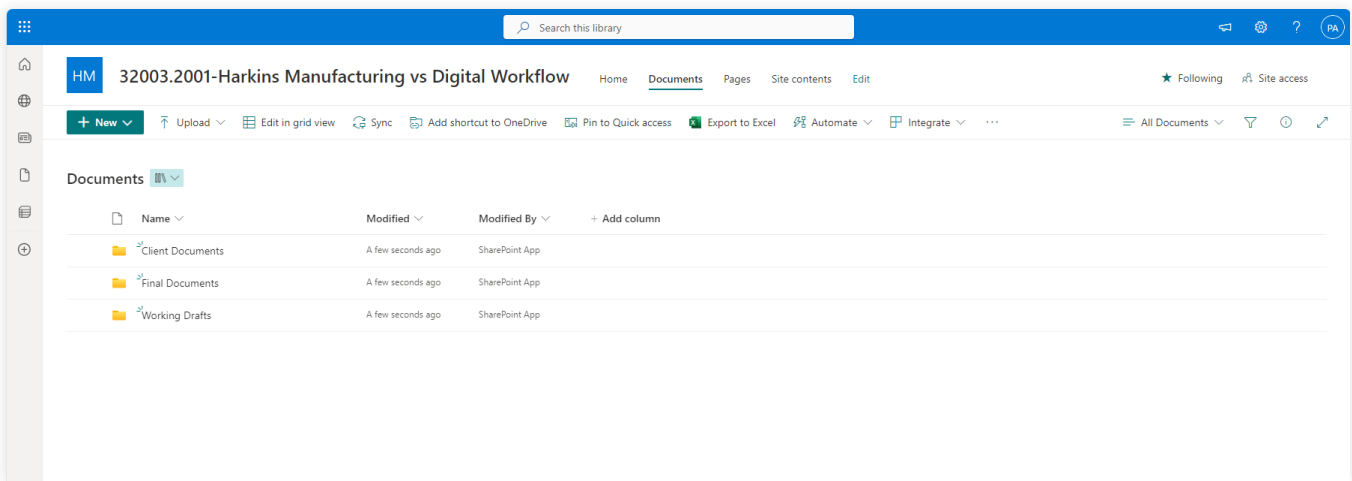

With CAM's provisioning capabilities, both data management and risk management become significantly more efficient and effective.

On top of that, CAM offers robust templating capabilities that significantly enhance workflow streamlining, especially for law firms. For example, CAM for Microsoft SharePoint provides a powerful templating feature that enables law firms to apply pre-configured and pre-templated sub-sites, and folder structures for each new SharePoint site with support for both classic and modern SharePoint sites. The templates can be defined and applied based on various attributes, including matter type, practice group, and location. This not only simplifies the workflows of law firms but also empowers innovation and continuous improvement teams, allowing them to define and apply templates based on multiple attributes.
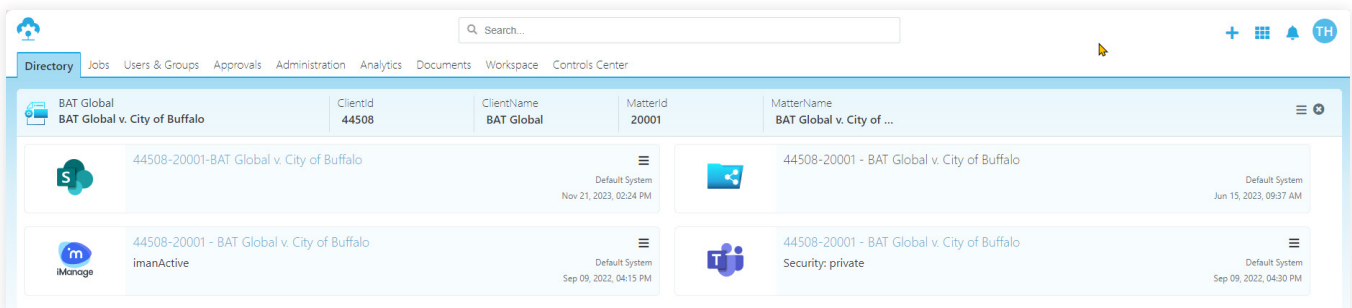

Seamless Content Movement

With CAM, law firms can effortlessly move data, including large files and complex folder structures, from their iManage System, to SharePoint. This cross-platform data movement streamlines workflows, reduces storage complexities, and enhances productivity while ensuring that all stakeholders have secure access to relevant documents.

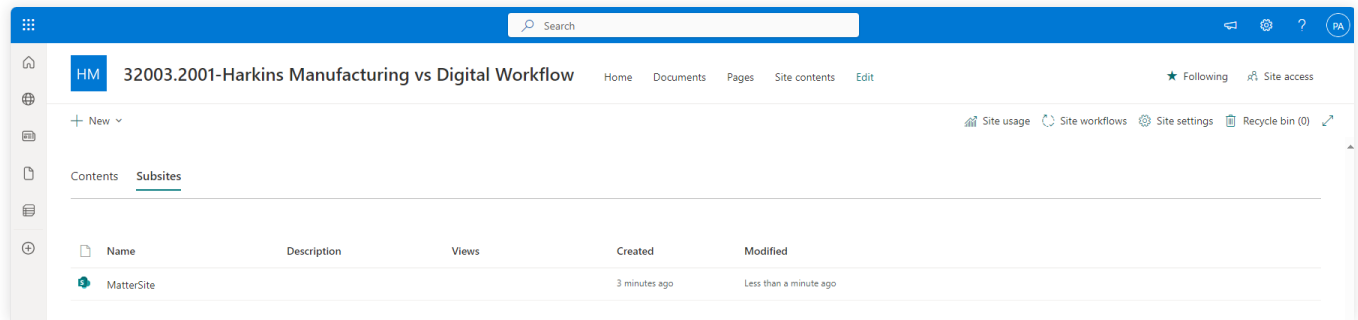

Centralized Collaboration Platform

CAM simplifies the collaboration process by providing a centralized document directory for all legal matters. This integration enables efficient collaboration while maintaining data integrity and security, giving legal professionals the confidence to collaborate with external parties and leverage SharePoint's advanced features.

Full Control Over Site Access and Permissions

Maintain complete control over site access and permissions with CAM for SharePoint. Our solution recognizes the unique needs of the legal industry, ensuring that sensitive information remains secure while still allowing for efficient collaboration and data management.

Enhancing External Collaboration Capabilities

By harnessing the power of CAM's SharePoint integration, law firms can enhance their external collaboration capabilities, build stronger relationships with clients and partners, and establish a centralized repository for all legal matters.

Compliance and Security

Beyond the integrations, CAM provides a comprehensive solution that ensures compliance with regulatory policies and industry standards. CAM's advanced features are specifically designed to drive efficient workflows while maintaining the highest levels of compliance and data security.
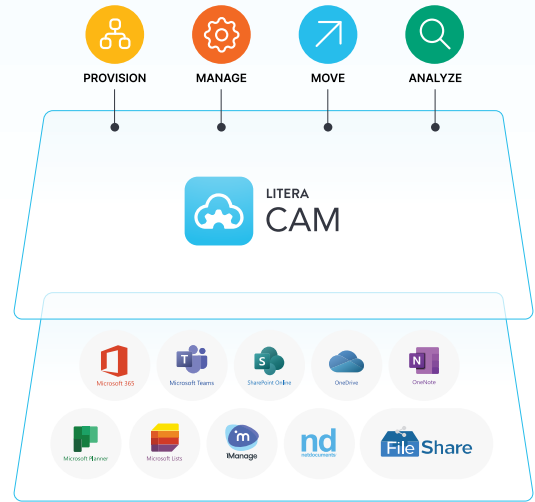

Innovate Your Firm with CAM for SharePoint

With CAM for SharePoint, law firms can enjoy secure, centralized collaborative extranet sites, seamless content movement, and full control over document access and permissions. Our solution empowers firms to focus on building stronger relationships with clients and partners, while maintaining compliance and data security. Elevate your law firm's efficiency and productivity with CAM for SharePoint.

CAM: Your Partner in Seamless Collaboration

CAM is THE MISSING LAYER to modern legal collaboration. It allows organizations to adapt their tools to the unique project and client lifecycles in their business. This creates a more efficient and secure environment for teamwork to happen, simplifying **provisioning, managing, moving, analyzing, protecting, and maintaining compliance of data across multiple collaboration systems**, ultimately mitigating privacy and cybersecurity risks.

PROVISION
Streamline Your Workflow

- Boost your team's productivity with easy setup processes
- Create workspaces that match your firm's unique needs

MANAGE
Centralized administration of matter content

- Permit administrative activities without the requiring administrative access to the DMS
- Optimize data management with PowerDesktop license

MOVE
Effortless Document Mobility Across Platforms

- Keep your firm's operations running smoothly with seamless data mobility
- Encourage collaboration with easy content transfer across workspaces and systems

ANALYZE
Intelligent Data Insights for Informed Decisions

- Leverage data insights to drive success
- Track key metrics with easy-to-use dashboards
- Get a bird's eye view of all workspace activities for swift decisions
- Action on data derived from multiple data sources in a flexible graphical interface

CAM PROJECT TEAMS
Manage Add-On

- Fortify your client data with advanced access management (Project Teams)

BUSINESS CONTINUITY
Analyze Add-On

- Minimize loss with built-in business continuity features
