LITERA COMPARE SERVER

Seamless Server-Based Comparisons

Foster flexibility, innovation, and security with accurate browser-based comparisons through Litera Compare Server.

Litera Compare Server is web service that allows server-side document comparisons and exposes APIs integrate with a range of client applications. With Litera Compare Server, IT teams can continue to innovate while meeting user needs.

Why Litera Compare Server?

The legal drafting workflow is highly collaborative and dynamic. Nowadays, legal professionals need the ability to deliver documents from anywhere, at any time, and IT professionals must deliver the flexible and secure ecosystem to support this new way of working.

With Litera Compare Server, users can compare documents in seconds wherever they want, including proprietary third-party applications. By exposing APIs, Litera Compare Server allows easy integration with existing programs on Mac, PC, tablets, and other devices so users can compare two Microsoft Word, RTF, PDF, TXT, or HTML documents and get a detailed redline.

Enhance User Experience

Gain consistency in user experience across platforms and devices that support the drafting workflow.

Available to All

Empower everyone with access to your applications to use comparison functionalities.
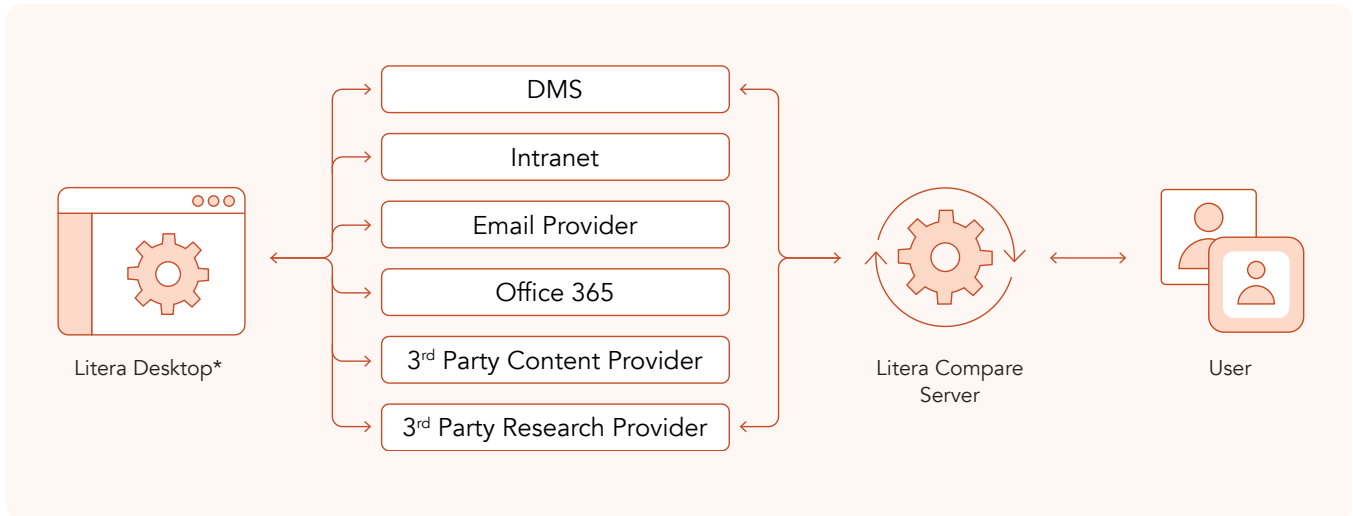

Greater ROI

Demonstrate ongoing innovation, workflow optimization, and cost savings with the flexibility of Compare Server.

"The ability to easily integrate our [DMS] environment meant we could take the additional benefits of Litera Compare, such as faster and more efficient document comparison, whie allowing users to continue using the document management system they are familiar with. We are always looking to deploy tools that make it easier for staff to do their jobs and the combination of [our DMS] and Compare does that."

Corporate Counsel, Tullow Oil

* Litera Compare Server is included in standard Litera Desktop licensing. Litera Compare Server includes Litera Compare for Microsoft 365 and email comparison workflows.

Key Features

☑ **Get Detailed Redlines**

Users can compare two Microsoft Word, RTF, PDF, TXT, or HTML documents and get a detailed redline.

☑ **OCR for PDF Comparisons**

Scanned PDF documents run through Litera Compare Server's OCR functionality to perform accurate comparisons.

☑ **Send Comparison Requests by Email**

Users can send two files to a specified email address and receive a comparison back, removing the need for a comparison application interface.

☑ **Integrate Across Client Applications**

Use the exposed simple APIs to integrate with:

- Cloud Service Providers
- Document Management Systems (iManage and NetDocuments)
- Google Workspave
- Third Party Research Providers

- Third Party Content Providers
- Internal Intranet
- Microsoft 365
- Other leading programs
