Scoping

Data-driven matter management, pricing, and budgeting made easy

Foundation Scoping uses natural language processing to automatically read timecard narratives, helping law firms to understand exactly who does what, when, where and at what cost.
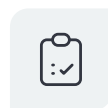

Price competitively, but profitably

- ✓ Find representative matters in minutes
- ✓ Accurately scope work in detail

Keep matters within budget

- ✓ Minimize out of scope work
- ✓ Track budgets

Recover your time billed quickly

- ✓ Provide granular breakdowns of work done
- ✓ Comply with outside counsel guidelines

"Beyond the scaling and time-saving Foundation Scoping allows us to do, [the Litera team] really listen[s] to your clients.

Additionally, and more importantly, that quality and efficiency is passed through to our clients in the form of better budgets, and increased adoption of AFAs, providing greater cost certainty."

BARNES & THORNBURG LLP

# Understand and address the performance of your processes, practice areas, new technologies and more.

By understanding and categorizing timecard narratives into types of work, Foundation Scoping gives law firms powerful data that can be used to solve a huge variety of challenges.

Your lawyers are already writing timecard narratives. So, why not use that data to:

- Know which people will benefit most from access and training for specific technologies

- Quantify the ROI on new technology and processes

- Find the right expert, however specific or niche your need is

Reduce days of manual work to minutes

- Foundation Scoping is unique in using natural language processing (NLP) to classify time entries from their narratives.

- Our algorithm breaks the narratives into activities that represent the work done by lawyers

- Unlike using phase/task codes, it's accurate, flexible and allows for analysis of both historical and current data
