

CONTENTCRAWLER

Make All Your Documents Searchable

Improve productivity and compliance with contentCrawler's advanced Optical Character Recognition (OCR) and compression capabilities.

contentCrawler is an OCR and document compression solution that identifies non-searchable documents in a repository and converts them into text-searchable PDFs of manageable sizes – all while running 24/7 without any intervention.

Why contentCrawler?

More than 30% of documents in any content repository are image-based and unsearchable. These invisible documents hinder the ability of legal professionals to find business-critical documents and make it impossible for IT teams to properly manage and govern them.

contentCrawler runs 24/7 without any intervention and delivers detailed reports on processing statistics and errors, allowing IT teams to automate OCR and compression tasks, save on cloud-storage costs, and empower legal teams to be more productive.

"contentCrawler is a no-brainer, which is very rare. Any technical concerns raised by users was overshadowed by the software's functionality, and the workflow it makes possible."

Kenneth Schultz
CIO, Becker & Poliakoff

Smart Detection

Leverage smart technology that finds and assesses image-based documents.

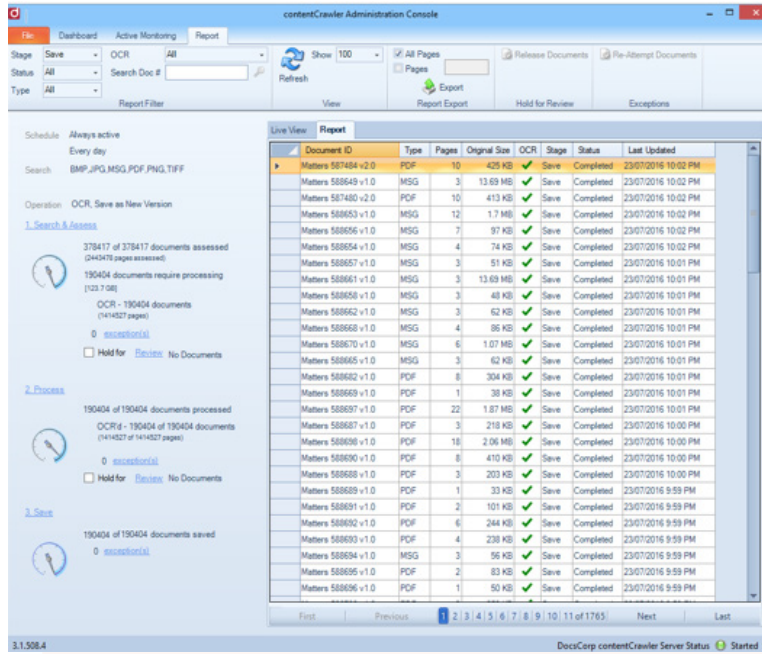

24/7 Automation

Make every document 100% searchable with an automated solution that runs 24/7.

Enhanced Compliance

Ensure documents are searchable to comply with client and regulatory requirements.

“contentCrawler just sits in the background and does the job of OCRing for us whatever the source - i.e., scanned from a device, downloaded from an external portal or sent as an attachment by email.”

Christel Aguila
Head of IT,
Winckworth Sherwood

Key Features

- 
Convert to Searchable PDFs
 Find image-based documents and non-searchable PDFs and have them automatically converted to searchable PDFs.
- 
Reduce File Size
 The Compression Module reduces file size, saving on data storage or migration costs without affecting document quality.
- 
Dual Processing Mode
 Process legacy documents that come in through scanning or mergers and acquisitions, and any new files created - simultaneously.
- 
24/7 Automated Processing
 The solution processes and compresses documents 24/7, running in the backend. Administrators can set it and forget it, while staff add and profile documents as usual.
- 
Dashboard Reporting
 Use the Administration Console Dashboard to view progress on OCR and compression, see the number and percentage of documents processed, etc.
- 
Integrations
 contentCrawler finds and processes documents in document management systems, such as iManage and eDocs, and your file system.
